Perform Examples 21.23, 21.24, and 21.25; that is, enter the code (adding comments) as a script file. Modify the code for each example as appropriate to use subplots to display all the plots on one page with title and labels. Then, run the code and print the output for each example.

Due date: Wednesday 4/21/03

Report requirements: For each of the three examples, provide the well-commented code for the script file and a copy of the one page output subplot displays. Include the thoughtful, reflective paragraph from each of the team members summarizing what has been learned.
